16. ABSTRACT

Sanitary landfills can cause considerable harm to sensitive ecosystems if they are not properly located, designed, and managed. The purpose of this report is to document the proximity of sanitary landfills included in this study in Louisiana to wetlands and deepwater habitats (i.e., rivers, lakes, streams, bays, etc.). The sanitary landfills were identified on U.S. Fish and Wildlife Service's National Wetlands Inventory maps. The nearness or proximity of the sanitary landfills to wetlands and deepwater habitats was determined by drawing three concentric regions around the point representing the location of each landfill. The radii of the concentric regions were: 1/4 mile, 1/2 mile, and 1 mile. A companion report summarizes the statewide results. The data on individual landfills include: (1) general facility/site data, and (2) wetlands/deepwater habitat data. These facilities have the potential to adversely affect sensitive ecosystems, such as wetlands and deepwater habitats, either through habitat alterations or through the migration of contaminants from sanitary landfills.

INTRODUCTION

Sanitary landfills, as typically defined, are waste management facilities regulated under Subtitle D of the Resource Conservation and Recovery Act (RCRA). These facilities are commonly referred to as municipal waste landfills and they are primarily used to receive household refuse and nonhazardous commercial waste. However, sanitary landfills also receive other types of Subtitle D waste, such as sewage sludge and industrial wastes. Sanitary landfills typically receive some hazardous waste in the form of household hazardous waste, and hazardous waste from small quantity generators as defined in 40 CFR Part 261.10 (Definitions). Depending upon the definition of a sanitary landfill used by the individual states, there are between 6,500 and 9,300 of these facilities permitted in the United States (U.S. EPA, 1987).

Sanitary landfills can cause considerable harm to sensitive ecosystems if they are not properly located, designed, and managed. These facilities have the potential to adversely affect sensitive ecosystems, such as wetlands and deepwater habitats, either through habitat alterations or through the migration of contaminants from sanitary landfills. In order to evaluate the seriousness of this problem, information is needed on the nearness of sanitary landfills to wetlands and surface water bodies. The purpose of this study is to document the proximity of sanitary landfills included in this study in the state of Louisiana to wetlands and deepwater habitats (i.e., rivers, lakes, streams, bays, etc.). This report documents the proximity of individual sanitary landfills; a companion report, "Proximity of Louisiana Sanitary Landfills to Wetlands and Deepwater Habitats, Statewide Results," summarizes the statewide results.

CONCLUSION

1. There are 47 individual sanitary landfills included in this study in Louisiana for which data on their site proximity to wetlands and deepwater habitats are available.

MATERIALS AND METHODS

The source of data used to determine the locations of the sanitary landfills was the computer data file developed by Development Planning and Research Associates, Inc. for use by U.S. Environmental Protection Agency's Office of Solid Waste in its RCRA Subtitle D program. The location of each sanitary landfill was identified on U.S. Fish and Wildlife Service's National Wetlands Inventory maps and the

proximity of the sanitary landfills to wetlands and deepwater habitats was determined by drawing three concentric regions around the point representing the location of each landfill. The radii of the concentric regions were: 1/4 mile, 1/2 mile, and 1 mile.

Wetland and deepwater habitat classification types used in this report are those developed by the U.S. Fish and Wildlife Service (Cowardin et al., 1979). Five types of wetlands are distinguished in this report, i.e, Marine, Estuarine, Riverine, Lacustrine, and Palustrine. Four types of deepwater habitats are distinguished in this report, i.e, Marine, Estuarine, Riverine, and Lacustrine. The Palustrine system includes only wetland habitats.

The data on individual landfills included in this study in the state of Louisiana include: (1) facility/site data, and (2) wetlands/deepwater habitat data.

The companion report, "Proximity of Louisiana Sanitary Landfills to Wetlands and Deepwater Habitats, Statewide Results," presents the details on how the data were obtained and tabulated.

RESULTS

Appendix A gives the coding procedures used to compile the data on the proximity of waste sites to wetlands and deepwater habitats. Appendix B presents the data on individual sanitary landfills included in this study in the state of Louisiana. There are 93 sanitary landfills included in this study in Louisiana that are contained in the DPRA data base; data are available on the proximity of 47 of these landfills to wetlands and deepwater habitats.
